## CITY BUILDING SERVICES HVAC-R & BUILDING SOLUTIONS

To whom it may concern,

**SAVE up to 38%\* on your energy costs with Engas Natural Refrigerants.**

With the onset of global initiatives to reduce greenhouse gases, ozone depleting substances, and the need for energy efficiency in refrigeration and air conditioning equipment, the Engas Australasia team came together with the aim of distributing a range of natural and environmentally friendly refrigerants.

Engas Australasia supplies Hydrocarbon Refrigerants which are natural, nontoxic refrigerants that have no ozone depleting properties and absolutely minimal global warming potential. Engas produces a range of natural refrigerants that have been engineered from blended hydrocarbons.

The refrigerants have been engineered to save up to 38%\* or more, on power consumption and reduce carbon emissions. Engas refrigerants are non-toxic and do not contain any ozone depleting properties. They have minimal global warming potential. They are designed to replace the current chemical refrigerants such as R410a and R32 on the market which are being phased out globally.

Natural refrigerant can be used in residential, commercial and industrial air conditioning, chilling, freezing, cool rooms, food refrigeration, process cooling & more. No need for mechanical modification of new or existing refrigeration and air-conditioning systems – LOW CAPEX changeover. Engas hydrocarbon refrigerants provide a safe and easy drop-in solution for trained engineers and technicians.

City Building Services has partnered with ESE Energy Management & Environment Sustainability Engas and is the only Authorised Distributor in New South Wales.
